

The background of the entire page is a blue-tinted photograph of a power tool, likely a reciprocating saw, with a black handle and a metal blade. The word "evolution" is printed in white on a black rectangular label on the handle. The main logo "evolution" is in the center, with a white swoosh above the "e".

Faster, Safer & Cleaner

Abrasive cutting can create excessive dust, fumes, smoke, fire and can even explode. Evolution® TCT saws cut steel quickly, producing no heat and virtually no sparks, creating a much safer working environment. The cut is consistently clean and burr free, meaning less time is spent finishing the material after the cut.

Full Specialist Blade Range Available

The economy and high performance of an Evolution® blade stretches beyond the ability to cut steel cold. Evolution's specialist blade range also enables you to cut steel, stainless steel, aluminum and wood with the optional blades available.

3 Year Warranty

All Evolution® Steel range saws come with a 3 year limited warranty. Designed with performance and versatility in mind and tested to the highest standards of reliability and durability. So although you're covered by our warranty, it's possible you'll never need it.

STEEL

Designed specifically to cut steel. Material applications include: Square tube, angle iron, mild steel plate, pipe, tube & other ferrous metals. (HB 200-220)

STAINLESS STEEL

Designed specifically to cut 302, 303 & 304 grades of Stainless Steel only. Material applications include: square tube, angle iron, stainless steel plate, diamond plate, pipe & tube.

ALUMINIUM

Designed specifically to cut Aluminium & other non-ferrous metals. Material applications include: grating, extrusions, pipe & tube.

WOOD

Designed specifically to cut Wood. The high grade carbide tooth configuration enables fast efficient cutting & increased durability.

THIN STEEL

Designed specifically to cut Thin Steel. Ideal for cutting ferrous metal under 3mm thickness. Material applications include: sheet metal, metal roofing and electrical conduit.

=

EQUIPPED WITH A LONG-LIFE TUNGSTEN CARBIDE TIPPED BLADE
THE LOWEST COST-PER-CUT,
COMPARED TO ABRASIVE SAWS.

TCT VS ABRASIVE

Unlike abrasive discs that quickly wear down through use, Evolution® TCT blades maintain both cut quality and cutting capacity throughout the life of the blade. Add to this the fact that an Evolution® TCT blade can last longer than twenty abrasive discs*, and the true value of an Evolution® blade really does hit home! A more affordable way of cutting steel.

FASTER, SAFER & CLEANER

Abrasive cutting can create excessive debris, fumes, smoke, fire and can even explode. Evolution® TCT saws cut steel quickly, producing no heat and virtually no sparks, creating a much safer working environment. The cut is consistently clean and burr free, meaning less time is spent finishing the material after the cut.

Kit includes 12, 14, 16, 18, 20 & 22mm Cutters and Pilot Pins.

6PC CUTTER KIT

50mm Depth Cutters

Kit includes 12, 14, 16, 18, 20 & 22mm Cutters and Pilot Pins.

Evolution cutters are guaranteed to outperform annular cutters made out of HSS, Cobalt, or Tini Coated Cutters. This is because...

The Tini Coating on HSS annular cutters increases the cost of the cutter but only enhances the cutter's appearance.

- HSS M-2 Annular Cutters can only be heat treated up to 64 RC before they become too brittle.
- Cobalt Annular cutters can only be heat treated up to 66 RC before they become too brittle.
- Evolution Premium Annular Cutters can be heat treated up to 68RC and they still have tempered hardness.

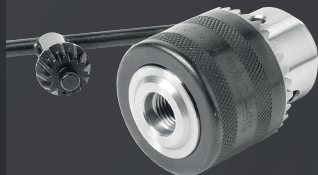

A higher RC rating without brittleness means more holes cut per sharpening.
